

PIRANHA

CREEPING BENTGRASS

PIRANHA

CREEPING BENTGRASS

ONE TOUGH BENTGRASS

- TOLERATES HIGH HEAT CONDITIONS
- DEEP ROOTED VARIETY
- DROUGHT TOLERANT
- BROWN PATCH AND DOLLAR SPOT RESISTANCE
- EXCELLENT TURF QUALITY

Piranha is a new creeping bentgrass variety developed specifically to tolerate heat and a number of other stressors that destroy tees and greens resulting in costly repairs. **Piranha** was bred to excel in high heat conditions that so easily destroy other lesser varieties. Progeny tests were conducted across multiple sites and locations to identify deep rooted, stress resistance germplasm. **Piranha** was then selected for improved turf quality and seed yield. In addition **Piranha** has also shown excellent disease resistance to dollar spot and brown patch.
